

IKT Netherlands

IKT Netherlands

Together with municipal partners, IKT Nederland carries out research projects such as this one in Almere: in a test track along a row of trees, 24 passive root protection measures have been installed.

IKT founded a new branch in the Dutch city of Arnhem in 2013. “**IKT Nederland**” is now the **first point of contact** with IKT for Dutch and Belgian network operators, engineering consultancies and contractors on all matters concerning **sewer systems**.

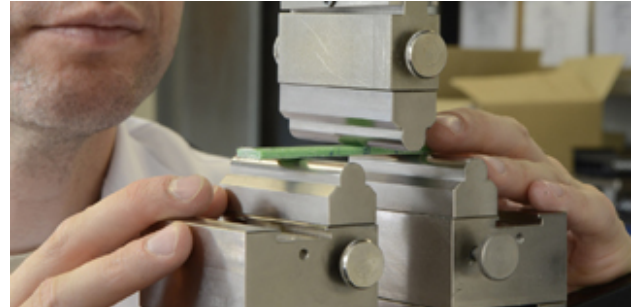

Visit IKT Netherlands

IKT Netherlands provides:

- Materials tests in its **in-house laboratory**, particularly for testing of CIPP liners
- On-site support and taking samples of CIPP liners
- Inspection of waste-water manholes before and after refurbishing
- Structural-analysis calculations for CIPP liner projects
- Consulting engineering services on all aspects of sewer

- rehabilitation
- Seminars and training events

Accredited laboratory

First accredited test centre for CIPP liners in the Netherlands: Material samples from rehabilitated sewers are put through their paces in the laboratory of IKT NL.

IKT Netherlands is the first **accredited** test centre for CIPP liners in the Netherlands.

It is accredited in accordance with European/ISO Standard: DIN EN ISO/IEC 17025 for selected mechanical and technological tests on polymeric components of pipe and CIPP-liner systems and on samples of GRP laminates.
